

How to Contribute

Thank you for your interest in contributing to the cp-algorithms project! Whether you want to fix a typo, improve an article, or add new content, your help is welcome. All you need is a [GitHub account](#). Contributions are managed through our [GitHub repository](#), where you can directly submit changes or propose improvements.

The pages are compiled and published at <https://cp-algorithms.com>.

Steps to Contribute

Follow these steps to start contributing:

1. **Find the article you want to improve.** Click the pencil icon  next to the article title.
2. **Fork the repository** if prompted. This creates a copy of the repository in your GitHub account.
3. **Make your changes** directly in the GitHub editor or clone the repository to work locally.
4. **Preview your changes** using the [preview page](#) to ensure they look correct.
5. **Commit your changes** by clicking the *Propose changes* button.
6. **Create a Pull Request (PR)** by clicking *Compare & pull request*.
7. **Review process:** Someone from the core team will review your changes. This may take a few days to a few weeks.

Making Larger Changes

If you're planning to make more significant changes, such as adding new articles or modifying multiple files:

- **Fork the project** using the traditional Git workflow (create a branch for your changes).
- **Edit files locally or in the GitHub UI.**
- **Submit a pull request** with your updates.

For help with this workflow, check out this helpful guide: [Step-by-step guide to contributing on GitHub](#).
