

Algorithms for Competitive Programming

The goal of this project is to translate the wonderful resource <https://e-maxx.ru/algo> which provides descriptions of many algorithms and data structures especially popular in field of competitive programming. Moreover we want to improve the collected knowledge by extending the articles and adding new articles to the collection.

Compiled pages are published at <https://cp-algorithms.com/>.

Changelog

- August, 2025: Overhaul of CP-Algorithms [donation system](#). Please consider supporting us, so that we can grow!
- August, 2025: Launched a [Discord server](#)!
- October, 2024: Welcome new maintainers: [jxu](#), [mhayter](#) and [kostero](#)!
- October, 15, 2024: GitHub pages based mirror is now served at <https://gh.cp-algorithms.com/>, and an auxiliary competitive programming library is available at <https://lib.cp-algorithms.com/>.
- July 16, 2024: Major overhaul of the [Finding strongly connected components / Building condensation graph](#) article.
- June 26, 2023: Added automatic RSS feeds for [new articles](#) and [updates in articles](#).
- December 20, 2022: The repository name and the owning organizations were renamed! Now the repo is located at <https://github.com/cp-algorithms/cp-algorithms>. It is recommended to update the upstream link in your local repositories, if you have any.
- October 31, 2022: It is now possible to select and copy $\LaTeX$ source code of formulas within the articles.
- June 8, 2022: Tags are enabled. Each article is now marked whether it is translated or original, overall tag info is present in the [tag index](#). For translated articles, clicking on `From: X` tag would lead to the original article.
- June 7, 2022: Date of last commit and author list with contribution percentage is tracked for each page.
